CAREER OBJECTIVE

A passionate Computer Science and Engineering student looking for an internship to utilize my programming skills, collaborate with industry professionals, and gain practical exposure to real-world software engineering challenges

WORK EXPERIENCE

Stop1.ai • Internship

Apr 2026 - Jun 2026

Stop1Ai, Virtual

Completed a 2-month AI industrial training program with Fox Trading, gaining hands-on experience in machine learning and computer vision. Used TensorFlow to build a text classification model that processes and categorizes text data efficiently. Developed an object and landmark detection system with TensorFlow to locate key features in images. Learned how to manage machine learning workflows under direct industry mentorship while expanding foundational skills in PyTorch for model development.

EDUCATION

B.Tech, Computer Science & Engineering

2025 - 2028

Neil Gogte Institute Of Technology

Diploma, Computer Science & Engineering

2022 - 2025

Government Polytechnic, Gadwal

PORTFOLIO

PROJECTS

[Pharmacy Student Notes ↗](#)

Apr 2026

Pharmacy Student Notes Hub is a centralized, web-based academic resource platform designed to systematically organize educational content across all 8 semesters of a pharmacy curriculum. Built with a clean, mobile-responsive layout and hosted on GitHub Pages, the application provides students with streamlined, one-click access to semester-specific subject notes alongside critical exam preparation tools, including Previous Year Question Papers and Important Formulas

[Campus Canteen ↗](#)

Apr 2026

Project Overview Developed a responsive, lightweight digital canteen ordering system designed to simulate real-time menu browsing, dynamic state management, and an interactive checkout flow.

Key Features

- **Dynamic Content Filtering:** Engineered algorithmic filtering to instantly sort menu items by categories (Meals, Snacks, Drinks).
- **Advanced Sorting:** Implemented dual-directional price sorting (Low-to-High / High-to-Low) using native JavaScript array manipulation.
- **Real-Time State Management:** Programmed an interactive billing tray that handles state updates, live mathematical total calculations, and clearing actions seamlessly.

Technical Highlights

- **Vanilla Architecture:** Built entirely with pure HTML5, CSS3, and core JavaScript (onclick handlers, forms, and native array methods).
- **Performance-Focused:** Purposely avoided heavy external frameworks or heavy DOM manipulation APIs to maximize application performance and ensure a minimal footprint.

Alzheimer's Detection using MRI scans

May 2026 - Present

Developed an AI/ML model designed to analyze and process MRI scans for efficient anomaly detection.

Preprocessed and cleaned medical imaging datasets to optimize them for model training and feature extraction.

Applied deep learning techniques to identify key structures and potential irregularities within the scans.

Evaluated model performance using accuracy and classification metrics to ensure reliable and precise results.

SKILLS

- Java
- Web Design
- Python
